Grishma Thumar
(415) 740-7237 | gthumar@sfsu.edu | San Francisco, CA | LinkedIn | GitHub

Skills

- **Languages & Tools:** Python, Java, C/C++, JavaScript, React, TypeScript, HTML, CSS, TailwindCSS
- **Systems:** Linux/Unix, Multithreading, Process management, Memory Systems
- **Cloud & DevOps:** Docker, Kubernetes (basics), AWS EC2
- **Backend & Cloud:** REST APIs, FastAPI, AWS EC2, Docker, Kubernetes (basic)
- **Tools/ AI Tools:** MySQL, Git, Nginx, ChatGPT, GitHub Copilot (for debugging, automation, and workflow optimization)
- **Practices:** Agile, Testing, CI/CD, API Integration, State Management

Certifications & Additional Experience

- **Advanced Diploma in Programming** – C, C++, Java, Web Development
- **CodePath Technical Interview Prep** – Data Structures & Algorithms
- **Web Development Bootcamp**

Systems & Engineering Interests

- Software testing & integration for distributed systems
- Containerized environments (Docker/Kubernetes)
- Autonomous systems & control architectures
- Linux systems programming and debugging
- Network communication (TCP/IP, UDP fundamentals)

Leadership & Involvement

Vice President - *SparkSF @SFSU*

• Led and coordinated **networking events** and **career workshops** for students, fostering peer professional development.

Logistics Team Lead - *SF Hacks @SFSU*

• Led budgeting and evaluation planning for large-scale hackathons

Social Media Chair - *Society of Women Engineers*

• Managed event promotion and engagement strategy, increasing online interaction by 40%.

Venture Management Partner - *IncuGator*

• Mentored student startups and evaluated the technical feasibility of projects

Education

San Francisco State University – B.S. Computer Science || GPA: 3.93 Fall 2022-Fall 2026

Dean's List from Fall 2022 – Fall 2025

Data Structures & Algorithms, Operating Systems, Linear Algebra, Probability / Statistics, Machine Learning

Projects

SFSU Tutoring Platform — *Full-Stack Web Application*

- **CTO** for a 5-member engineering team building a tutoring platform from scratch using Agile sprints.
- Contributing to **design and development of platform features** for student engagement
- Built and debugged backend services using REST APIs and cloud deployment (AWS EC2)
- Analyzed system logs to identify performance bottlenecks and improve reliability
- Conducting testing and iterative improvements to enhance user experience

Distributed Log Monitoring & Alert System — Backend / Systems Project

- Built a distributed log monitoring system using Dockerized microservices to process real-time logs
- Developed REST APIs (Python/FastAPI) for log collection, processing, and storage
- Implemented anomaly detection and automated alerting for error spikes and system failures
- Enabled inter-service communication using HTTP/sockets in a Linux environment
- Improved system observability through centralized log aggregation

Work Experience

IT Help Desk Assistant - *J Paul Leonard Library, San Francisco State University* *Jul 2023 - Jul 2025*

- Provided technical support for **Linux, Windows, and campus network systems** used by students and faculty.
- Diagnosed and resolved **system, software, and networking issues** across university machines.
- Assisted with **software deployment, system configuration, and troubleshooting performance issues.**
- Created documentation for recurring issues, improving troubleshooting efficiency
- Worked with diverse users, strengthening **team collaboration and communication skills**
